ETHICS	WHAT ARE THE IMPLICATIONS OF USING AI FOR THIS PROJECT? Using AI for this project helped me increase my productivity by breaking task into subtask hence better understanding. But sometimes provide hallucinated results therfore the response need to be check throughly before using it. .	WHAT STEPS ARE WE TAKING TO MITIGATE ERRORS OF AI FOR THIS PROJECT? I already had an idea of how the response should look like so in case of a weird resposne I self implemented it. Other than this, I always cross-checked all the responses.

WHAT STEPS ARE WE TAKING TO MINIMIZE THE CHANCE OF HARM OR INAPPROPRIATE USE OF AI FOR THIS PROJECT?

I built the main logic for the code myself and only used AI for logic verification and some minor additions, hence the risk of harm was minimized.
